

## The Art of Logical Thinking: Or the Laws of Reasoning (Classic Reprint)

Excerpt from The Art of Logical Thinking: Or the Laws of Reasoning Reasoning is defined as: The act, process or art of exercising the faculty of reason; the act or faculty of employing reason in argument; argumentation, ratiocination; reasoning power; disputation, discussion, argumentation. Stewart says: The word reason itself is far from being precise in its meaning. In common and popular discourse it denotes that power by which we distinguish truth from falsehood, and right from wrong, and by which we are enabled to combine means for the attainment of particular ends. By the employment of the reasoning faculties of the mind we compare objects presented to the mind as percepts or concepts, taking up the raw materials of thought and weaving them into more complex and elaborate mental fabrics which we call abstract and general ideas of truth.
